The screenshot shows a web browser window with the URL kali.org/get-kali/#kali-live. The page is titled "Live Boot". It contains text about the benefits of using a Kali Live image, a note about recommended releases, and a "Kali-USB Documentation" link. Below this, there are two tabs: "Release Images" (which is selected) and "Weekly Images". Under "Release Images", there are three download options: "Intel/AMD 32-bit" and "Apple M1" (both with SHA256sums), and "SHA256sum" (with the value `a6e11071179f5c3a8c5195123b505f0d991a5c845d22bcba0f4355be69c6d9e8`).
